Kissflow page Creation using Kissflow Guide

1. You will be given with the page design which contains 5 to 6 sections which you will need to create (ignore header and footer). We will share the base style.scss / style.css with you where you have to inherit things.

2. Every section(s) should be responsive and pixel perfect on tablet, mobile and desktop resolutions.

Tablet	Desktop	Mobile
768x1024	1366x768	360x640
1024x768	1440x900	412x892 - Top notch
-	1920x1080	-
-	1680x1050	-

   Browsers List :
   All Modern browsers like Chrome, Safari, Firefox.
   Internet Explorer (Latest), Microsoft Edge.

3. You should only use bootstrap v4.3.1 and its classes/features which we have already included in our base style guide.

4. Try to utilize the classes for colors, font-family, buttons, variables (if you are using scss) from the base styles and check the reference block we have given. Check kissflow.com website and surf various pages for any queries on any element to achieve anything from the existing.

5. Some sections might require JS skills to manipulate DOM. utilize bootstrap components like accordion, tabs, dropdown, etc.,.

6. HTML Tags should be defined properly. Images should be named all small separated by _ underscore ex: image_name.svg.

7. The output HTML content is going to be converted into php, so keep that in mind while adding repeated contents like carousel.
